Course description

In December 2015, the Member States of the United Nations unanimously adopted the 2030 Agenda for Sustainable Development, which provides ‘a shared blueprint for peace and prosperity for people and the planet, now and into the future’ (see https://sdgs.un.org/goals). The 2030 Agenda sets out 17 Sustainable Development Goals (SDGs) and is an urgent call for action by all countries to end poverty and other deprivations, address the climate crisis, improve health and education, reduce inequality, spur economic growth, and preserve the oceans and forests. Oftentimes, trade and foreign investment significantly facilitate the achievement of SDGs. Sometimes, however, the pursuit of SDGs requires limiting trade and/or restricting foreign investment. International economic law, while aimed at promoting trade and foreign investment, allows – under certain conditions – national legislation and measures, which pursue SDGs, to impose limits on trade and restrict foreign investment.

This course aims at introducing students to the different rules of international economic law allowing governments to limit trade and restrict foreign investment in the pursuit of SDGs. This course seeks to make students reflect on whether the relevant rules of international economic law – as they currently exist – leave governments sufficient policy space to pursue and achieve the UN SDGs. The course focuses, in particular, on the policy space available to pursue and achieve SDG 1 (no poverty); SDG 2 (zero hunger); SDG 3 (good health and well-being); SDG 5 (gender equality); SDG 7 (affordable and clean energy); SDG 12 (responsible consumption and production); and SDG 14 (life below water).

Participation
The course is designed for advanced students in law, economics or political science with a strong command of English and an interest in international (economic) law and international relations. Prior knowledge of international economic law is helpful but not indispensable.
